                                                                 CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                      available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old peen renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TH genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G is an increase in the observed/expected third position G is initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribusonme binding site sequence (optimally 5-13bp before the initiation codon. If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEDY PGARALI DHYRYPKLERREPTVLEVRHDLEPTSTRDGCTSGFFVENT I INCTYGDVD

Unknown membrane protein, contains PS00402 Binding-protein-dependent
    been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C.
                                                                                                                                                                                                                                                                                                                       initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         transport systems inner membrane comp signature.                                                                                                                                                                                                                                                                                                     ÷
                                                             This DNA sequence comprises Mycobacterium bovis BCG deletion sequence BCGdelta3. A specific genetic deletion of this region results in an avirulence phenotype of the mycobacterium. 2 other deletion regions (see AAT3355) and AAT3355) have also been detected identification involved screening a BCG cosmid library with a radiolabeled probe obtained following DNA subtraction between virulent Mycobacterium tuberculosis H37Rv and avirulent BCG. The deletions provide useful markers for the identification of an avirulent, or a virulent, mycobacterial phenotype. Determination of an avirulence requires the detection of the presence or absence of the deletion; the deletions are detected either by detecting the presence or absence of deletion junctions (see AAT33538-46), or by detecting the presence or absence of the sequences contained within heletion pollonarides are used as contained within
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mycobacterium tuberculosis DNA sequence encoding mammalian cell entry
Detecting markers for avirulence in Mycobacterium - used in production of vaccines against bacterial infection, and to detect

The encoded protein sequence is given in AAM02301. The DNA was obtd. by ligating M. tuberculosis genomic DNA fragments into pBluescript II vector and screening recombinant E. coli strains for HeLa cell-
                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
The isolated DNA molecule of the invention confers on M. tuberculosis an ability to enter cells and to survive within macrophages. It encodes a polypeptide having a mol. wt. of about 50-55 kDa, pref. 52 kDa. The Ah sequence represents a highly hydrophilic protein with a hydrophobic region at its carboxy terminus. It could be a secreted protein, a cytoplasmic protein, or a surface protein with its carboxy terminus attached to the outer membrane of the organism. The deduced Ah sequence is in AAR71931.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA giving M. tuberculosis ability to enter mammalian cells and/or survive within macrophage(s), useful in vaccines to protect mammals against Mycobacterium tuberculosis infection
                                                                                                                                                                                                                                                                                                                                                                                                                 0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a Mycobacterium tuberculosis cellular uptake protein fragment, which confers on M. tuberculosis an ability to enter mammalian cells and to survive within macrophages. The protein can be used in a vaccine to prevent M. tuberculosis infection, and provide for the uptake in cells of, e.g. antibiotics, DNA fragments or anti-ineoplastic agents. Antibodies raised against it can be used to treat mammals already exposed to M. tuberculosis, to induce a passive immunity and prevent disease

These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of novel

The present invention describes primer sets for synthesising 5602 [111]-length cubas defined in the specification. Where a primer set comprises: (a) an oliqued primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides, or (b) a combination of an oligonucleotide comprises a least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence. Where the oligonucleotide which comprises a 1'-end sequence of an oligonucleotide sequence 3'-end sequence 15'-end sequence 3'-end sequence 15'-end sequence 15'-end sequence 16'-end 16'-end

immunodelicienty (STID), as well as viral, bacterial, Iungal and other intections. These infections include human immunodeficiency virus (HIV), herpeaviruses, mycobacteria, Leismania spp., malaria and candidiasis. The proteins can be used to treat autoimmune disorders such as connective tissue disease, multiple sclerosis, systemic upus crythomatosis, the und old atthritis, autoimmune pulmonary inflammation, duillain-Barre syndrame, antoimmune thyroiditis, insulin dependent diabetics mellitus, myasthenia quavis, graft versus-host-disease and autoimmune inflammatory eye disease. The proteins can also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              982 nucleotide sequences isolated from the Enterococcus faecalis genome. AAX12938 to AAX13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis quantum with communical importance. The products can be used to detect the presence
                               which the protein is preferentially expressed, as molecular weight, markers on Southern gels, and as chromosome markers or tags to identify chromosomes or to map gene positions. The proteins can be used in the treatment of immune deficiencies and disorders, such as severe combined
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A computer readable medium has been developed which has recorded on it

                       S
of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcus!

homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypoptide production, e.g. in R. coli hosts.
The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori lite cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 5679) was determined from overlapping conties generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori and igens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant

The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic. gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute. localised infections such as olitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 5579) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Genomic library; bacteria; human upper airway; otitis media; sinusitis; bronchopulmonary; endocarditis; meningitis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Genomic library for identifying diagnostic and therapeutic compositions, and for identifying virulence factors, regulatory elements and drug targets, comprises Moraxella catarrhalis nucleic

The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atheroselenosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thrombosmbolism and pulmonary embolism Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPs shown in the specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        digestion and assimilation of nutrients. Xylanases the efficiency of digestion and assimilation of nutrients. Xylanases are preferred all of digestion and assimilation of nutrients. Xylanases are preferred all of added during the feed pelleting process. To survive the priction of process and to have optimum activity in the animal, the xylanase needs to have high thermostability with optimum activity at physiological pul and temperature. Various xylanases have some properties suitable for feed applications but they lack the thermostability required to survive food pelleting. The present sequence is oligonucleotide, XyTv-104, from Trichoderma reesie. This sequence is oligonucleotide, XyTv-104, from Trichoderma reesie. This sequence was used along with 17 other overlapping oligonucleotides to construct the coding sequence for Trichoderma reesie xylanse Trx. The other oligonucleotides were:

XyTv-101 (AAA48229), xyTv-102 (AAA48231), xyTv-103 (AAA48231), xyTv-2

(AAA48239), xyTv-110 (AAA48231), xyTv-110 (AAA48231), xyTv-2

(AAA48239), xyTv-7 (AAA48240), xyTv-4 (AAA48241), xyTv-5 (AAA48231), xyTv-7
